BMT Fatihul Barokah Mobile App

Year Accomplished

2025

Role/Position

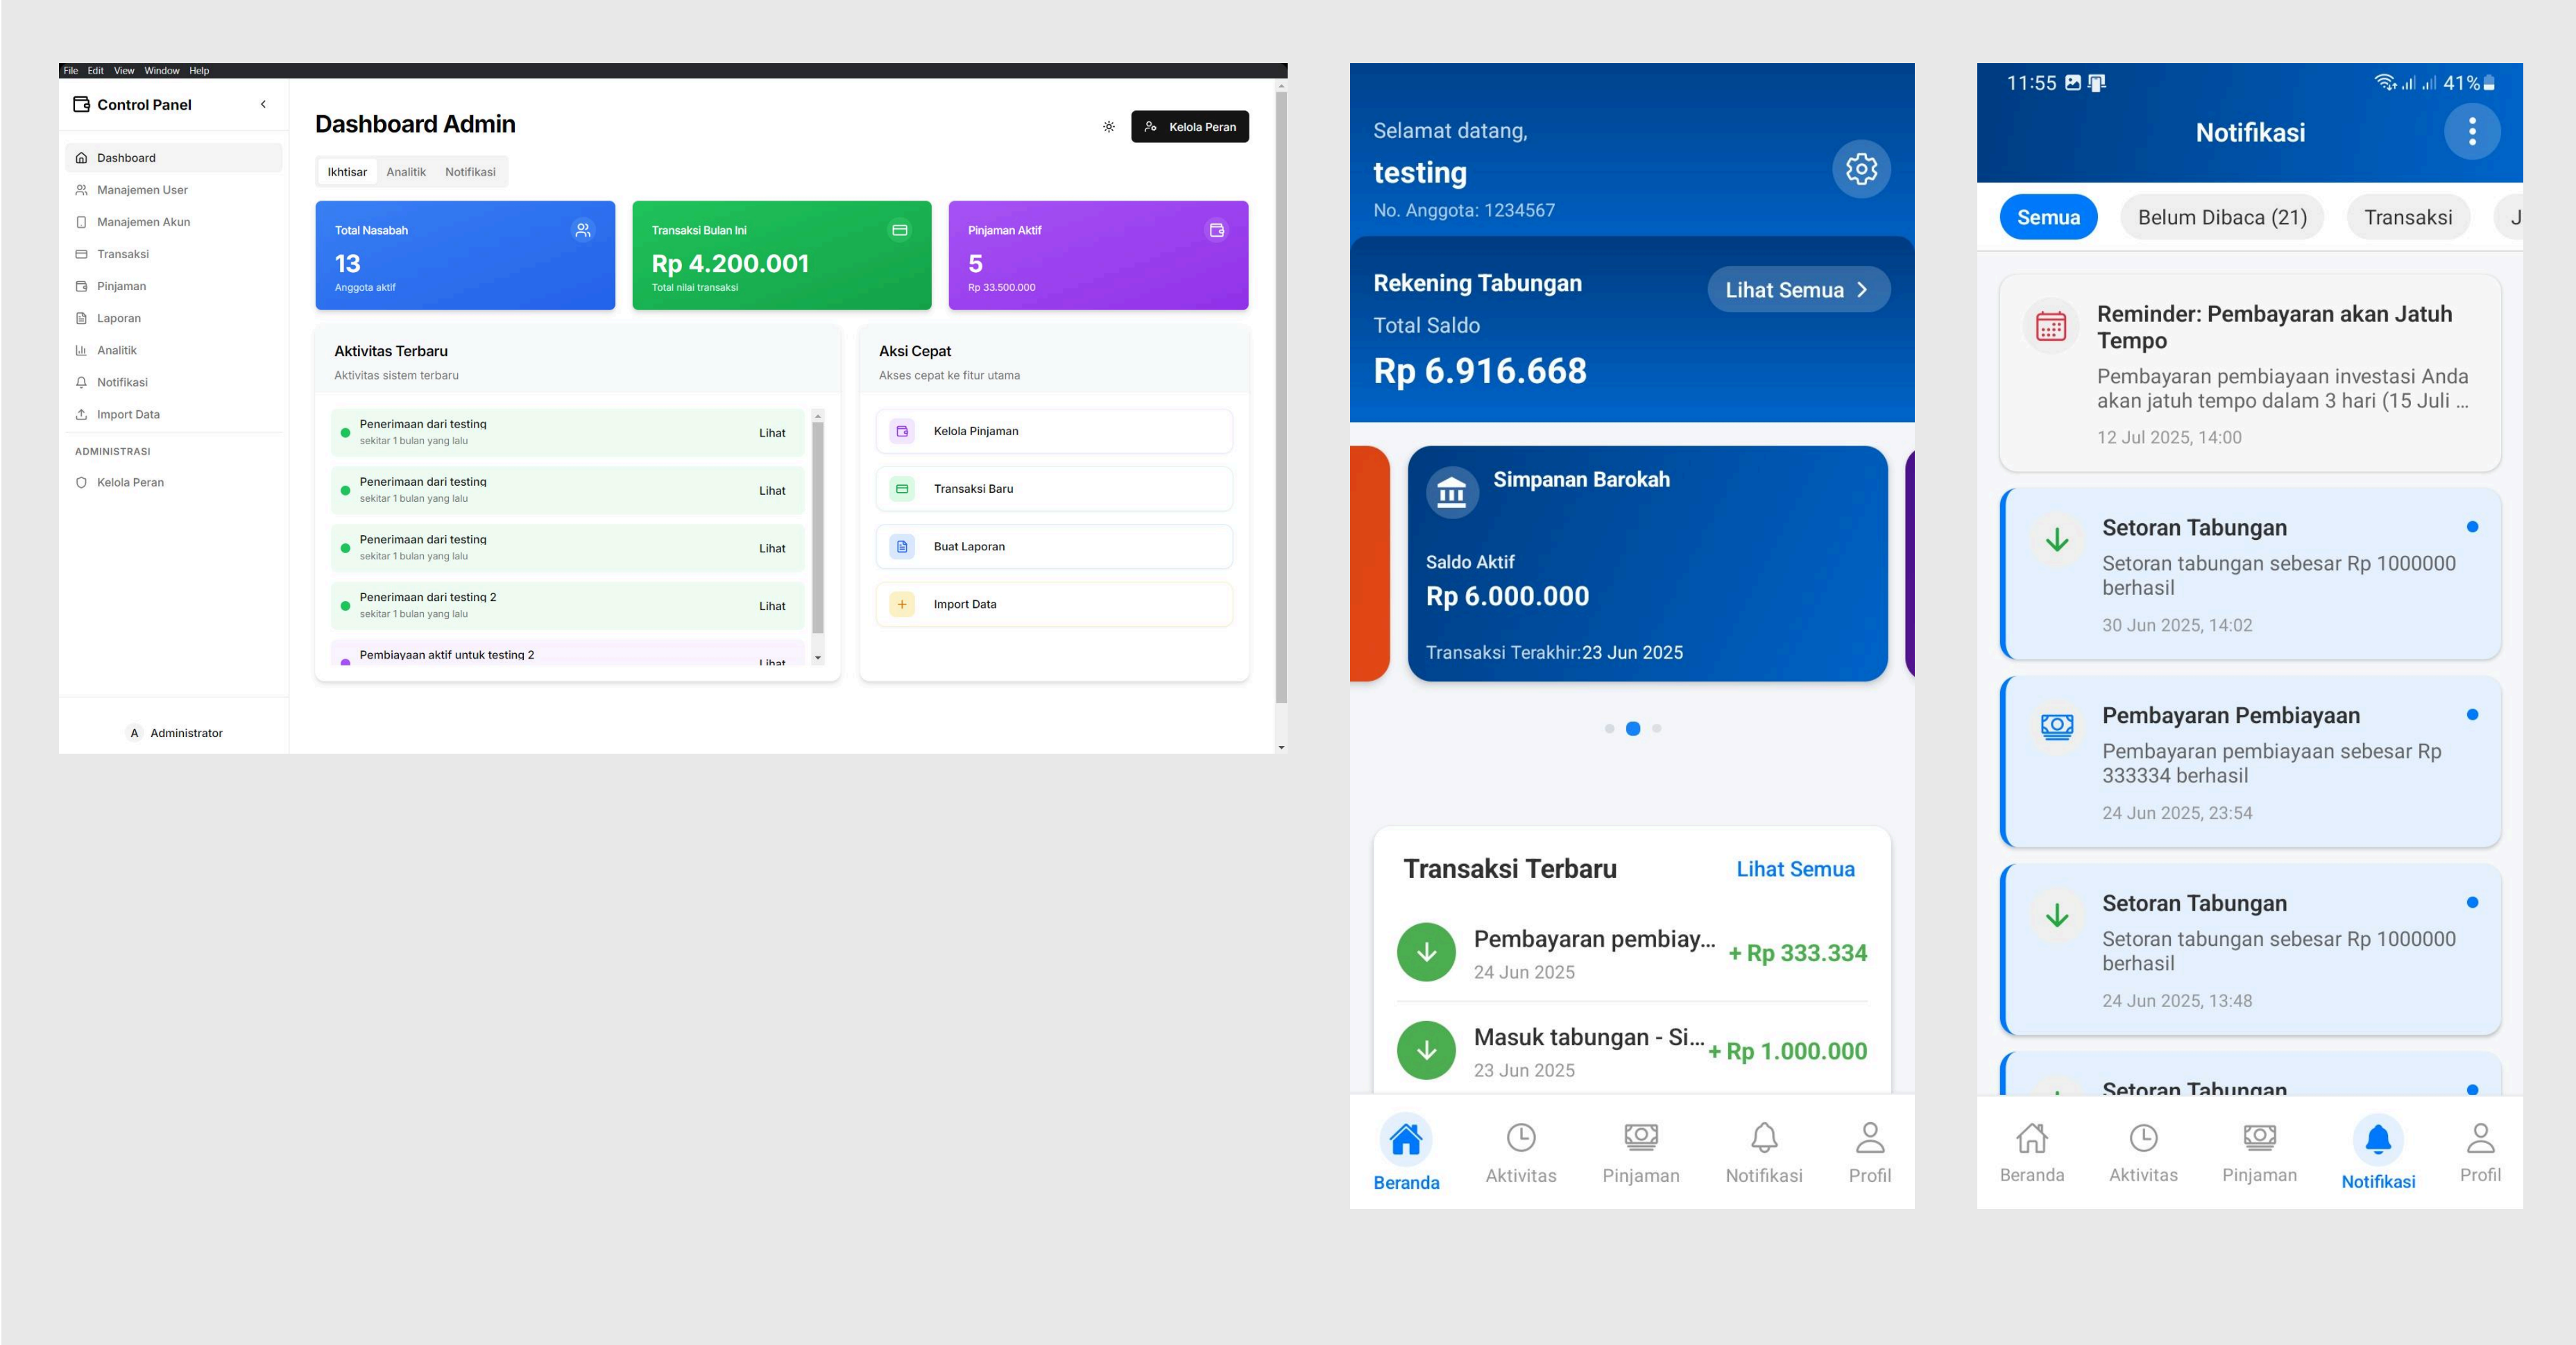

Internship Junior Developer,
Mobile App Lead

Publication Link

[Digitalisasi Layanan Koperasi: Mahasiswa Unpam Implementasikan Aplikasi Mobile untuk BMT Fatihul Barokah](#)

Project Description

BMT Fatihul Barokah Mobile App is a platform for KSPPS BMT Fatihul Barokah Gandaria cooperative. This project develops a digital platform for the sharia cooperative to address operational inefficiencies and enhance services. The platform moves away from manual processes by providing digital solutions that improve service quality, transaction accessibility, and transparency for members.

Project Title

Personal Insurance In-Patient Management

Year Accomplished

2025

Role/Position

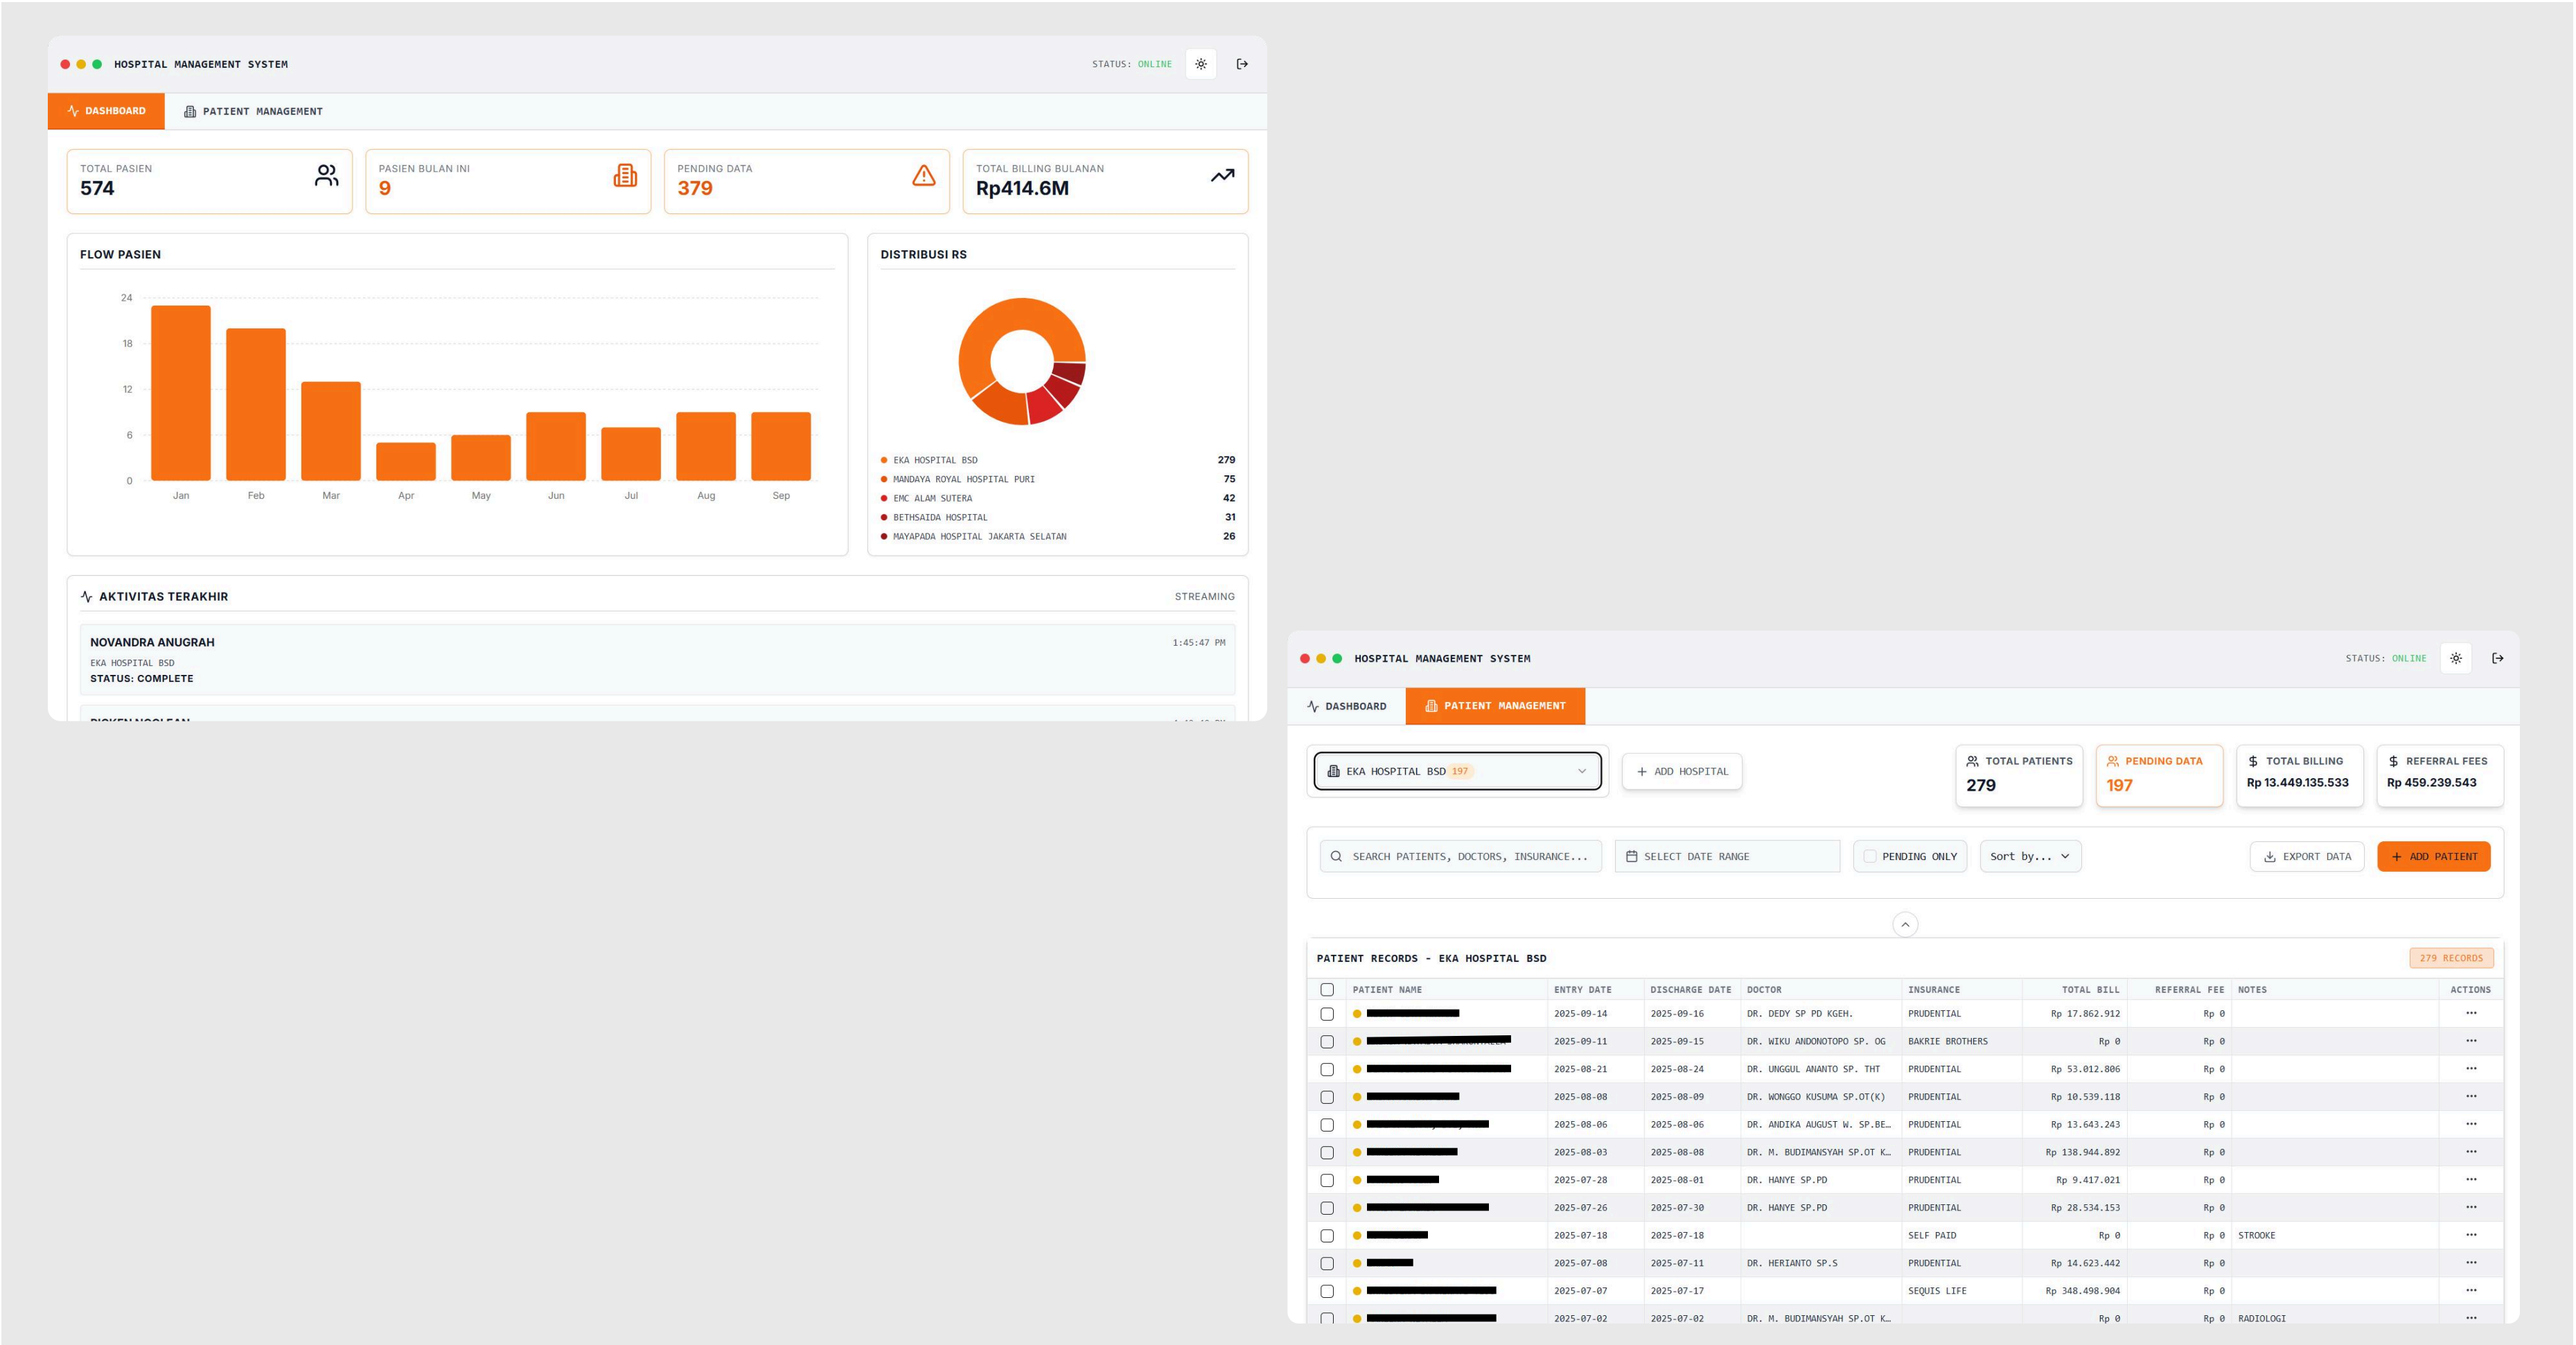

Product Manager

Publication Link

None. Project handed over to client.

Project Description

This project develops a dedicated web application for an insurance manager to streamline the tracking of in-patient clients. This platform replaces a high-friction, manual Excel-based workflow, providing a centralized system to monitor patient status, claims, and financial data across a network of 50+ National and International Hospitals.

Project Title

IoT RFID Attendance

Year Accomplished

2024

Role/Position

Frontend Developer

Publication Link

github.com/nvn01/IoTFrontend1
https://drive.google.com/drive/folders/1rXnDYuvQIldJm0KIIGQ9h7TkLMVvqxn?usp=drive_link

Project Description

A cloud-connected attendance system built for a Cloud Computing course project. RFID card taps record attendance, while a web dashboard lets users manage student data and review attendance history. I developed the frontend and connected it to the team's IoT and backend services on AWS.

Project Title

Bubbles IDX

Project Description

An interactive bubble-chart visualizer for the Indonesian stock market. Bubbles make price movements easier to scan, helping users spot gainers, losers, and broader market patterns at a glance. I built the web experience and its data integration, bringing market information into a clear visual interface.

Year Accomplished

tanyapajakai.com

Project Description

An Indonesian tax information chatbot and natural-language tax calculator built with Google Vertex AI and retrieval-augmented generation (RAG). I developed the application and its document retrieval workflow to make tax information easier to explore. The project was evaluated with tax experts and published in JOAIIA.

Project Description

A discovery platform that brings second-hand technology listings from multiple public sources into one searchable feed. I built the collection pipeline, listing normalization, and web interface to make scattered offers easier to browse and compare. Each listing connects users back to its original source.

Role/Position

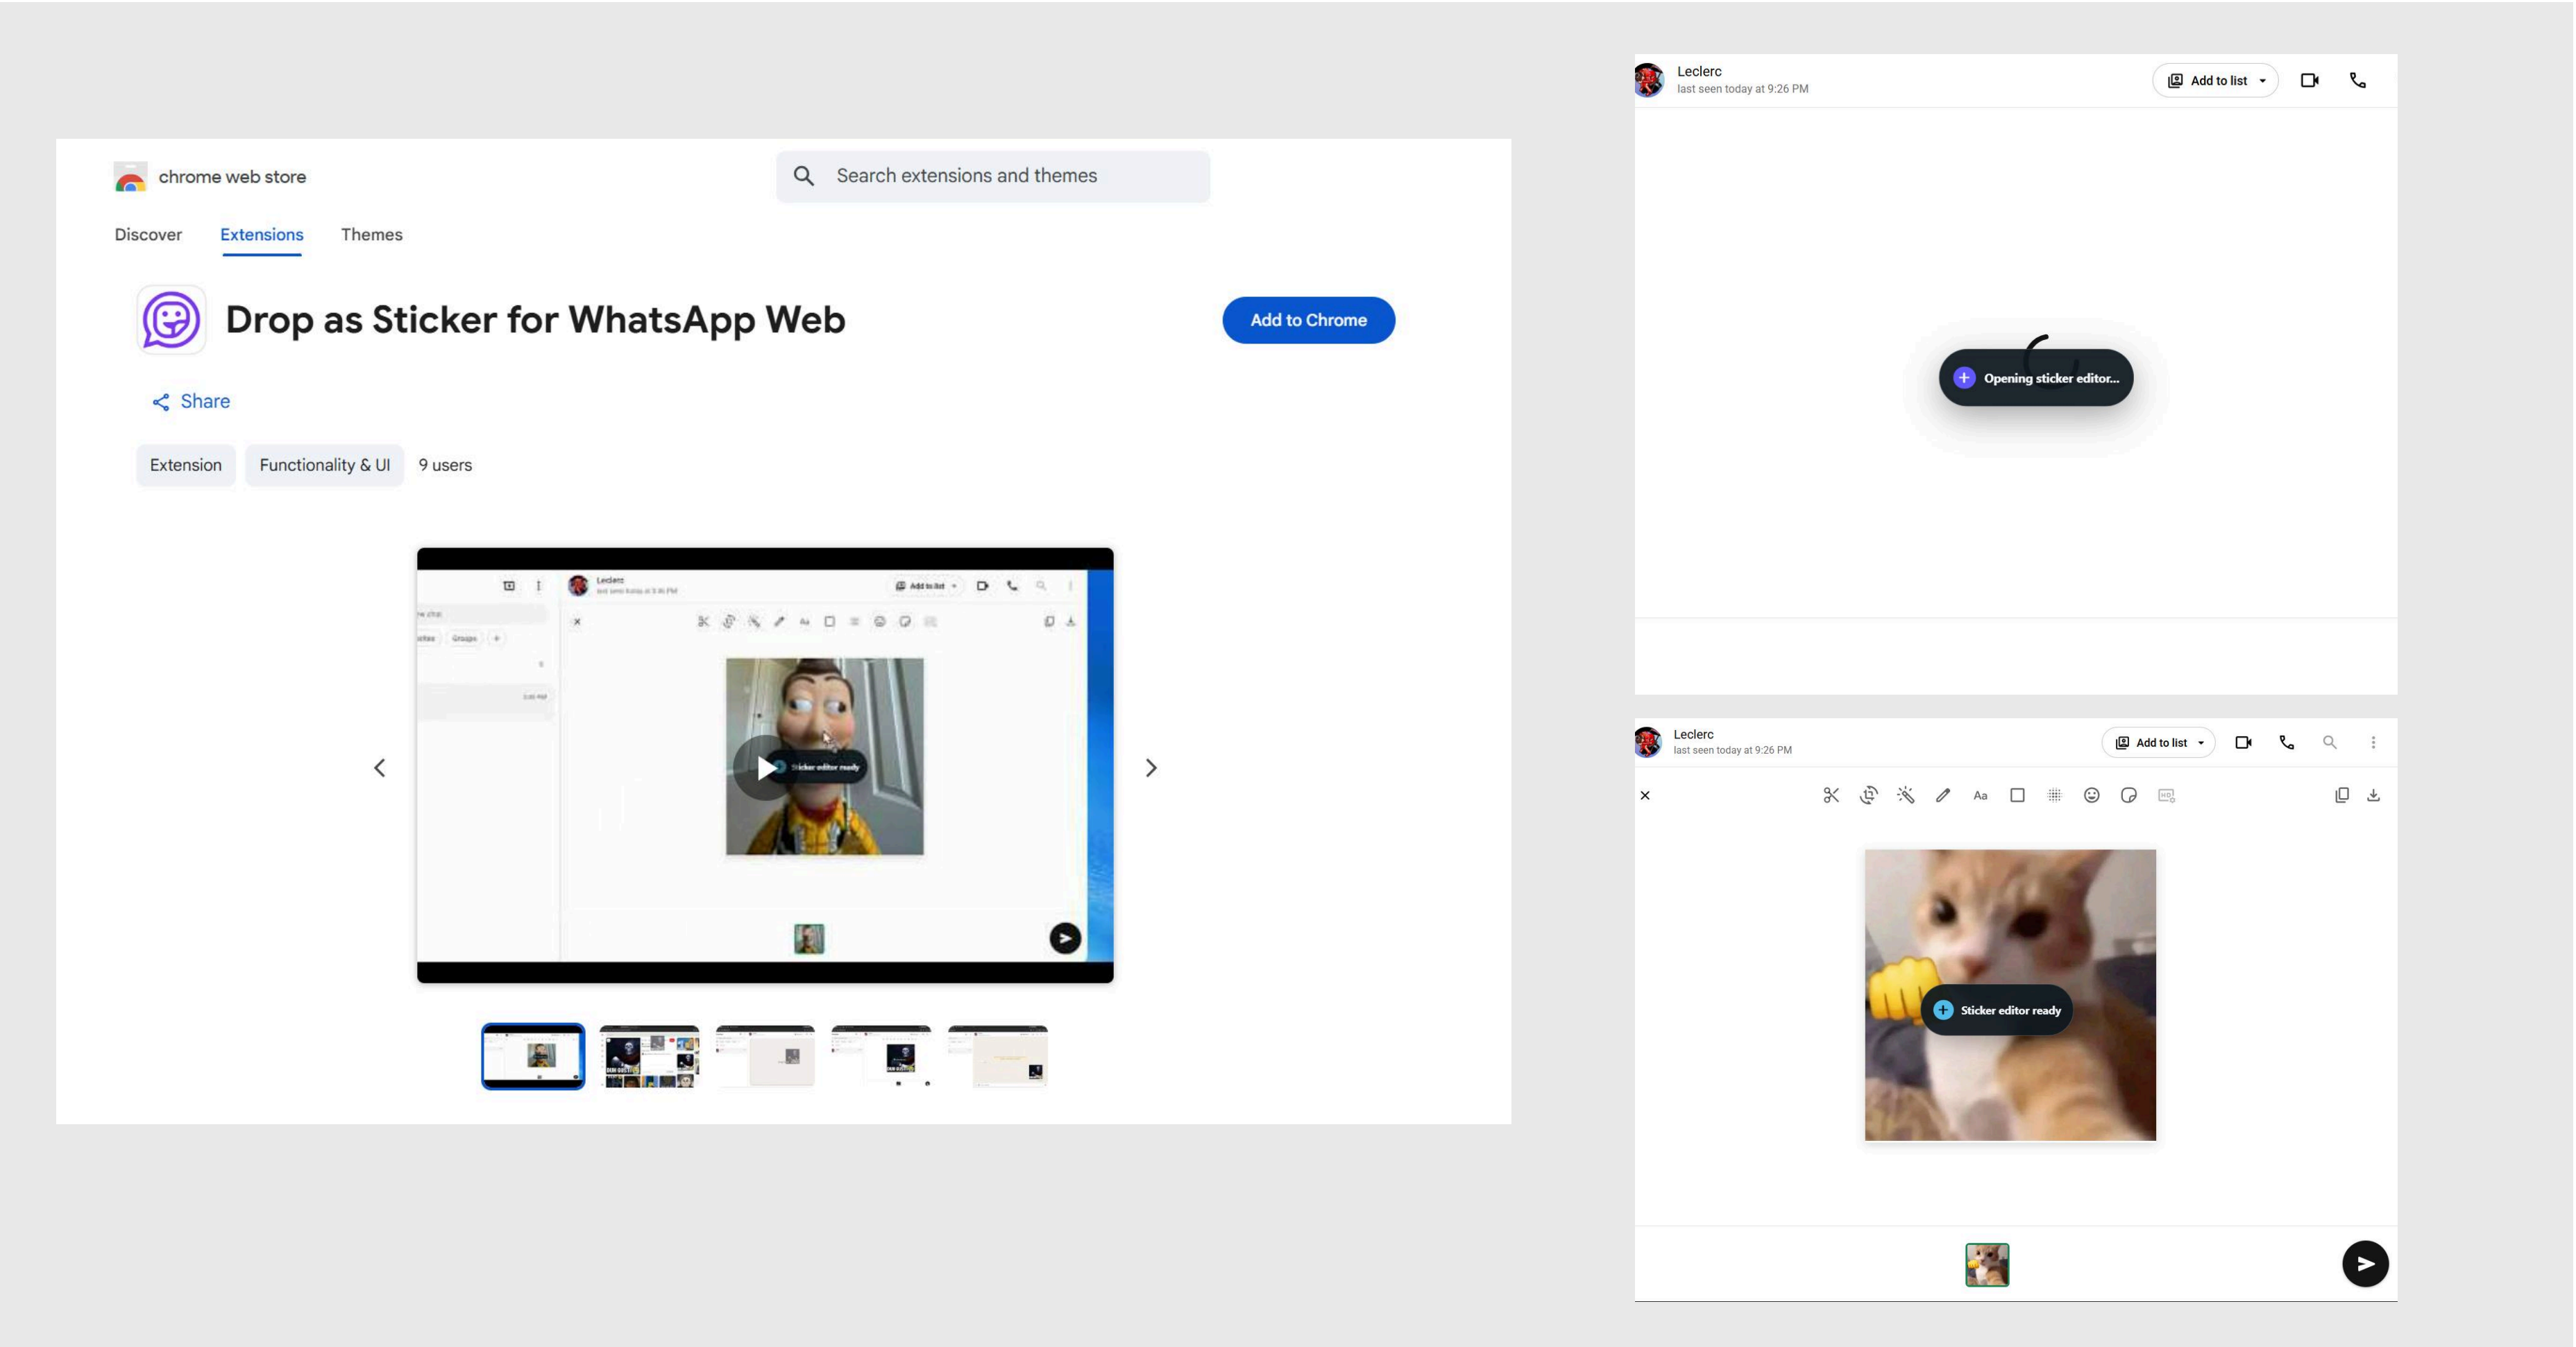

Independent Product Developer

Publication Link

[Drop as Sticker — Chrome Web Store](#)

Project Description

A Chromium browser extension that turns image drops into WhatsApp Web stickers. It routes a dropped image directly into WhatsApp's native sticker editor, reducing the steps needed to create and send a sticker. I designed and developed the extension with a focused workflow and no collection of user data.
